

## A429 Ettington Road, Wellesbourne Section 278 Roundabout Works

### Brief description of scheme

The purpose of the Works is generally to provide access to a housing development from the A429 Ettington Road by constructing a new roundabout on the A429.

### When will work commence?

Work is due to commence on the 1<sup>st</sup> July 2013 and is scheduled to last approximately 10 weeks.

### How much noise will there be?

Whilst work is being carried out the maximum level of noise you should hear would be the same level that you would experience within a noisy bar, and this should only be for short periods of time.

This will not be a constant noise but will be on various occasions when mechanical activity will be taking place. Officially the level will be up to about 100 decibels (dB).

Examples of what dB levels are:

- 70dB is the level of noise from a busy office, electric shaver or alarm clock.
- 90dB is the level of noise from inside a moving bus
- 100dB is the level of noise from a busy bar.

Your health and safety is very important to us and we will have control measures in place during the work
